

NOTICE

October 10, 2016

Well water is now potable and safe for all purposes, per the Western UP Health Department.

The well casing cap was replaced on Friday, September 30, 2016, and the well was decontaminated with chlorine tablets and bleach during September 30-October 3.

Water samples taken on October 4 and October 7 were negative for both coliform and *E. coli* bacteria.
